Section 1 Foreward

FOREWARD

An estimate of enrolment in public schools in the province of Manitoba for the period 1981 to 1986 has been produced by the Department of Education. The intention of the estimate is to provide some indication of the direction and magnitude of future enrolment fluctuations in order to facilitate planning of financial requirements. The enrolment estimate presented here should only be considered in conjunction with the purpose and assumptions under which these estimates were prepared.

The actual enrolment figures for the years 1973 to 1980, inclusive, represent the number of pupils who were attending public schools on September 30 of each year. This information was obtained from the Superintendent's Report submitted annually by each school division and school district in the province of Manitoba.

Similarily, the estimated enrolment figures for 1981 to 1986 represent the estimated number of pupils expected to be attending public schools on September 30 of each year.

Section 11 Assumptions and Methodology

Table I - Birth Statistics by Year
Graphic Representation of Public
School Enrolment in Manitoba: 1945 - 1986

ASSUMPTIONS AND METHODOLOGY

The methodology used in preparation of the estimated enrolments for grade II through to grade XII was derived primarily from retention rates. Historically these rates have been relatively reliable in estimating enrolment progression through the grades.

$$\text{RETENTION RATE} = \frac{\text{Enrolment in a given grade for a given year}}{\text{Enrolment in the preceding grade for the preceding year}}$$

Retention rates show the percentage of children that will proceed through the grades year by year. For grades II through grade XII, retention rates were calculated for the years 1973 - 1979, inclusive. These rates served as the basis for determining a retention rate that could be systematically applied to enrolments in the immediately lower grade of the preceding year, to calculate an estimated enrolment for each grade.

In using the retention rate method for estimating enrolments, it is assumed that past trends in retention rates will continue over the estimate period, 1981 to 1986. Implicit in the retention rates are such factors as migration, immigration, failures, and dropouts which combine to form the historical trends upon which the retention rates are based.

Estimating special education, nursery, kindergarten and grade I enrolments pose a particular problem because enrolment in these programs bear little relationship to enrolment in preceding years and therefore retention rates are not applicable.

Special education enrolments depend upon the number of children with special needs from year to year. Therefore, special education enrolments were estimated by observing historical trends and enlarging the estimate slightly, year by year,

to take into consideration the increasing attention being given, in recent years, to special needs.

Nursery enrolments were estimated by observing historical and recent trends and attempting to predict which direction enrolment would move. Between 1979 and 1980 there was a substantial increase in nursery enrolments in the province. It was assumed this trend would continue and the enrolments were estimated on this basis.

Kindergarten and grade I enrolments, in total, were estimated on the basis of birth statistics in previous years. Information obtained from the Office of Vital Statistics for Manitoba, indicates that the number of live births, on a yearly basis, is still declining (See Table I). The breakdown of kindergarten and grade I enrolments for each division was estimated in relation to the five-year-old and six-year-old population statistics available from the Family Allowance system.
